# PTCGFinder

## > Value Proposition

To create a more convenient and directly purchase platform

01

# Overview of our tasks

# Easy Task

## Choose user's own preference

- Pick at least 3 preferences to continue.

# Moderate Task

## Use advanced search to find specific cards

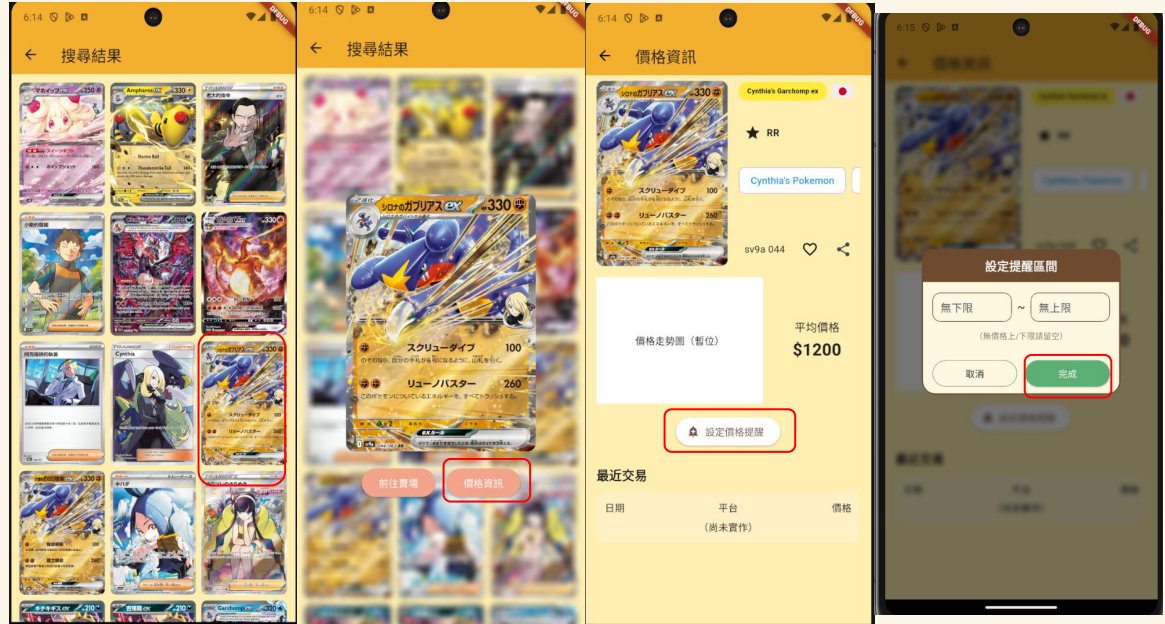

- Use the search bar to enter the advanced search interface and apply filters to find the cards you want.

# Complex Task

## Set price alarm

- Navigate to the card info page and use the price alert feature.

# Usability Analysis

# Severity 4

## Cards on the homepage lacking interaction

- modularize “clicking card” interaction, implement in only searching result wasn’t good to maintain this function

## Search’s card type filter doesn’t work

- Add attribute “card type” into card model & .json

# Severity 4

## Preference modify doesn't work

- Guide to preference setting (origin one or little adjustment)

## Seller's page should display cards on shelf

- Add the widget

# Severity 4

**Current searching function require precise input in certain format**

- (Temperate) Provide the format to users
- (Future) Introduce smarter searching engine with wrong spelling correction, auto format and translation

# Severity 3

## Cannot scroll each row in preference setting

- Adjust scrolling function, make it scroll in row or whole page depending on area it scroll on

## Show all cards in the row by clicking title was not intuitive

- Redesign the title to make the interaction more intuitive or try other interaction methods (e.g. while scroll to right edge)

# Severity 3

**Some current filters are unnecessary, and lacking some important filter**

- Adjust filters in searching with those info matter in searching cards
- Move some filters specializing on trades to store page (merge with sorting)

**No set's name in current layout**

- Build database for each set's name and id

# Severity 3

## Almost no return button

- Add them besides search bar

## Cannot view enlarged picture of goods

- Add the function

# Severity 2

## Chart duration is fixed

- Allow users to adjust the time range

## Price set in JPY by default

- Find a clearer way to display currency

# Severity 2

## Add to Favorites → Add to Cart

- Replace with action more aligned to purchase behavior

## Collapse button on the right

- Move to left for consistency with homepage layout

# Severity 2

## Flag icon removed from region info

- Consider adding region title back

## Info section unchanged

- Update it to reflect latest design

# Severity 1

## Price comparison feels unnecessary

- Users prefer comparing prices directly in the marketplace and rarely compare between different cards

# **Summary of Severity 3&4**

- **Broken interactions: Cards not clickable, preferences not editable**
- **Search limitations: Strict input format, unclear filters**
- **Incomplete navigation: Missing return buttons, unintuitive flows**
- **Missing information: Price details, card pack names, seller listings**

03

# Lessons learned

# What We Learned from the Usability Test

- Consistency builds trust
- Affordance and feedback are crucial
- Users search with mental models, not system structures
- Users expect control and flexibility
- “Useful” ≠ “Used” — Feature value comes from context

**Thanks!**
